

CONTAINER FOR SHAVING CARTRIDGE OR OTHER STORED ITEM

Abstract of the Disclosure

Sealed package that includes a formed plastic container, a shaving cartridge (or other stored unit) in a storage region in the container, and a removable film that covers and is sealed to a sealing surface around an entrance to the storage region. Side walls of the container have retaining structure that protrudes inward and retains the shaving cartridge (or other stored unit). The container has a lip adjacent to and extending from a side wall of the container at an entrance to the storage region to space a user's finger or thumb from the entrance during removal of the cartridge. The removable film has deadfold characteristics which facilitate removal of the cartridge when the film is still partially connected at the rear of the container. A plastic tab is attached to a portion of the film extending beyond the sealing surface of the container to initiate peeling of the film from the sealing surface. The plastic tab is spaced from the formed plastic container by a gap.
